EDUCATION

KENNESAW STATE UNIVERSITY

Bachelor of Science

Major in **Computer Science**; **GPA: 3.82/4.0**;

Relevant Coursework: Data Structures & Algorithms, Distributed Systems, Operating Systems, Computer Networks, Parallel & Distributed Computing, Software Engineering, Artificial Intelligence

Kennesaw, GA

Dec 2025

TECHNICAL SKILLS

Languages: Python, Java, Go, TypeScript, JavaScript, SQL, C++

Frontend: React, HTML/CSS, JavaScript, TypeScript

Backend: FastAPI, Flask, REST APIs, gRPC, Microservices, Kafka, Redis

Cloud & DevOps: AWS (EC2, S3, Lambda, IAM, CloudWatch, VPC), Docker, Kubernetes, GitHub Actions CI/CD

AI / LLM: LangChain, OpenAI API, Anthropic API, RAG pipelines, prompt engineering, structured output parsing, MCP, AI workflow automation

Databases: PostgreSQL, MySQL — schema design, indexing, query optimization, sharding

WORK EXPERIENCE

Software Engineer Intern — PACI

May 2025 – Sep 2025

- Rebuilt CI/CD workflows using **GitHub Actions** and **AWS**, reducing deployment time from **45 minutes** to **under 5 minutes** and enabling reliable daily releases.
- Developed secure **RBAC** authentication workflows across **3** permission tiers, validating **100+ access-control scenarios** and eliminating unauthorized production access paths.
- Improved **PostgreSQL** query performance by **~60%** through indexing and execution-plan optimization on high-traffic endpoints.
- Leveraged **AI-assisted development tools (Cursor, Copilot, Claude)** to accelerate debugging, **API integration**, test generation, and backend feature delivery across **Agile** sprints.
- Diagnosed production issues using **structured logging** and **root-cause analysis**, reducing operational coordination conflicts by **80%**.

Software Engineer Intern — Intelligentsia SA

May 2023 – Aug 2023

- Designed **modular Java** backend services automating **20+ enterprise workflows** across **5 departments**, reducing manual processing time by **50%**.
- Built **REST API** integration layer bridging modern services with legacy systems, eliminating repetitive data entry and improving operational consistency across teams.

PROJECTS

Event-Driven Order Fulfillment Platform — Python, FastAPI, Kafka, Redis, PostgreSQL, Docker, Kubernetes, OpenTelemetry

- Designed and deployed **high-throughput multi-service backend** using **Kafka** for async event streaming across full order lifecycle (**placed → accepted → paid → dispatched → delivered**).
- Implemented **Saga orchestration** pattern with compensating transactions; leveraged Kafka's **dead-letter queue** mechanism with custom routing and retry strategy for failure recovery.
- Deployed services to **Kubernetes** with **horizontal autoscaling**; built **OpenTelemetry** distributed tracing dashboards to monitor latency, failures, and reliability across the platform.

Distributed Key-Value Store and Rate Limiter — Go, TCP Networking, Consistent Hashing, LRU Eviction, Append-Only Log

- Built **in-memory distributed key-value store** from scratch in **Go** supporting **GET, SET, DEL, and TTL expiry** over raw **TCP** — no framework dependencies.
- Implemented **LRU eviction** and **append-only log** persistence for crash recovery; designed **primary-replica** replication for fault tolerance under node failures.
- Applied **consistent hashing** for distributed sharding across nodes; built **token-bucket rate limiter** for **high-throughput request** control under concurrent load.

MCP-Powered Internal Engineering Assistant — Python, FastAPI, LangChain, OpenAI API, PostgreSQL, React

- Designed **AI-powered assistant** enabling engineering teams to query metrics, replay failed events, and troubleshoot distributed systems through **natural-language** workflows.
- Built **LangChain** orchestration pipelines integrating **GitHub**, database schemas, **logs**, and internal tooling into a unified assistant; implemented **RBAC authorization** and **audit logging** for all administrative actions.

LEADERSHIP & ACTIVITIES

Amazon Campus Prep Series Participant — Amazon Web Services

- Completed **AWS career readiness** and **cloud architecture sessions** focused on technical communication, customer engagement, and AWS solution design principles.
